

Although FLATLITE is available in widths up to 30" (76.2 cm), extremely large panels can be made by simply attaching two or more panels side by side. One method that has been used is called "seaming".

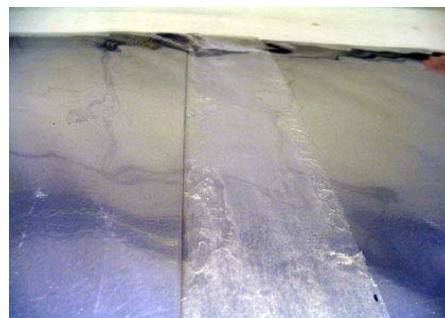

1. Create or order one panel with lamination extending 2" from edge of lamp on edge to be seamed.

2. Apply standard double sided tape to front of lamp over extended lamination.

back view

3. Press second panel (with standard 1/8" lamination) onto double sided tape.

4. The newly joined lamps can then further be strengthened by using common duct tape to secure the seam on the back of the lamps.
